Summary

Versatile Software Developer specializing in full-stack web development with expertise in .NET, C#, PHP, Kotlin, and JavaScript. Proven ability to deliver high-performance applications with intuitive user experiences. Passionate about problem-solving, innovation, and collaborating with teams to build scalable solutions.

Projects

Freelancer | Aquas Catering

- Developed and launched a responsive website using PHP, CSS, HTML, and JavaScript.
- Implemented Google Analytics to track website traffic and user behavior.
- Deployed the website on a free hosting platform for a cost-effective solution.

Freelancer | Sneaker City

- Sneaker City is a C# MVC e-commerce web app for sneaker enthusiasts.
- Users can browse sneakers, create accounts, add items to their cart or wishlist, and place orders securely.
- Integrated Stripe API for secure online transactions.
- Developed user authorization with role-based access control Designed an appealing and responsive UI using Razor Pages and Bootstrap.

Freelancer | Hangman Game

- I developed a Hangman game using WinForms, where players guess words while tracking their score, history, wins, and losses.
- The game offers an interactive experience, challenging users to complete the word before running out of attempts.

Freelancer | Flashcards App

- Built a Flashcards Console App in C# with dynamic question management and session tracking.
- Integrated Entity Framework Core for efficient database operations and seamless data management.
- Designed and implemented a report system to display session data.
